Homework 3

NOTE: You are not required to hand in the following exercises, but you are strongly encouraged to complete them to strengthen your understanding of the concepts covered in class.

Implement a full-duplex communication system with processes, A and B, and named pipes, $FIFO_1$ and $FIFO_2$. Process A writes a message to $FIFO_1$. Process B reads the message from $FIFO_1$, calculates the character, word, and line counts, and saves these statistics to a text file. Process B then reads the contents of that text file and writes it to $FIFO_2$. Process A reads from $FIFO_2$ and displays the results on the standard output.
